

DOCTOR AI

- Doctor AI, which is an artificial intelligence system designed to help with medical diagnosis using
 - Machine learning & deep learning.

ARLY
DETECTION

ACCURATE
METHODS

HIGH LEVEL ASSISTANT

Introduction:

- The main idea behind this project is to support doctors by providing faster and more accurate analysis of medical images or data.

★ PROJECT IDEA:

- Doctor AI works as an intelligent assistant for the doctor.
- Doctor AI helps doctors save time and reduce mistakes by giving fast and reliable insights.

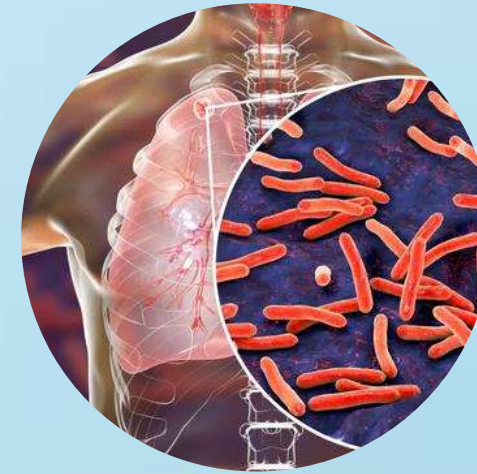

Dataset:

- We used ready-made medical data from the Kaggle platform, which is one of the largest and most famous global platforms specializing in providing data used in the fields of artificial intelligence and deep learning.
- Kaggle: It is considered a reliable source of data because it is used by researchers, data engineers, and physicians involved in global research projects and competitions.

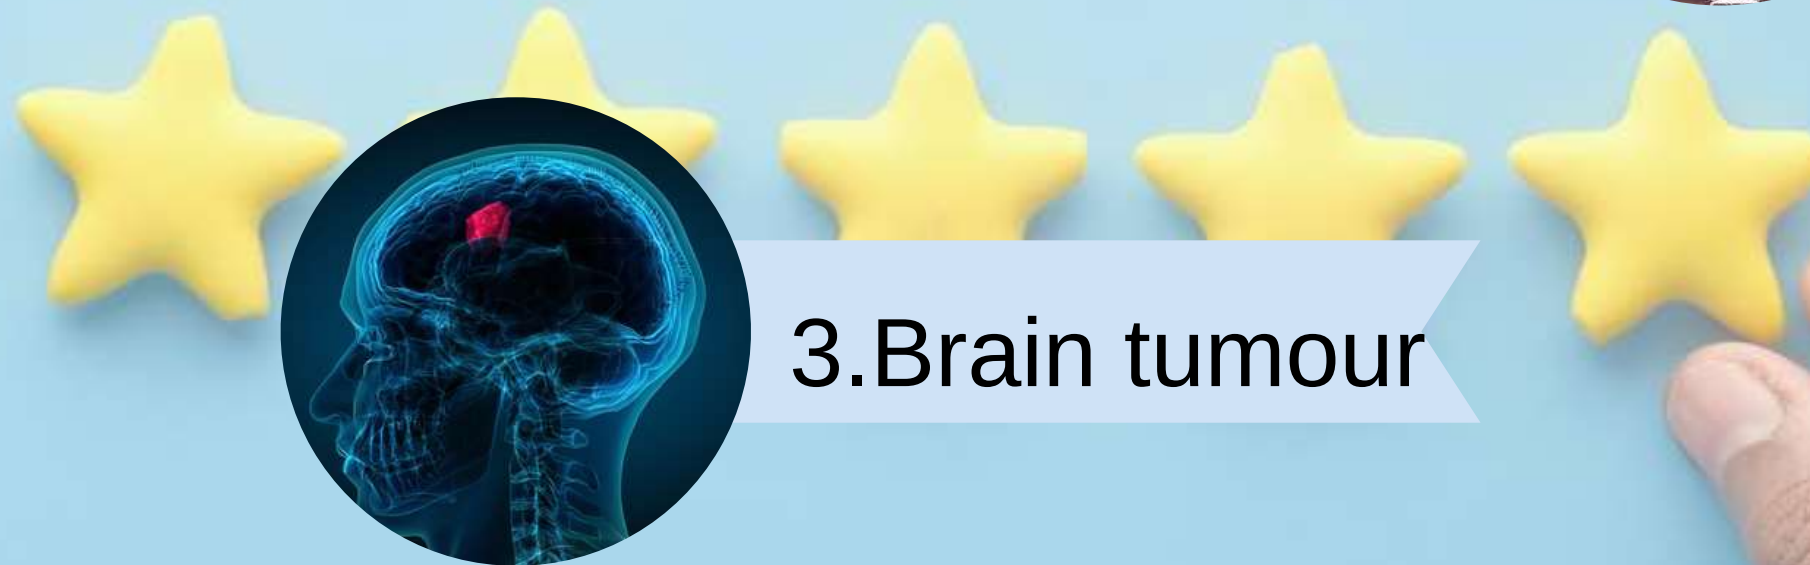

Some Targeted Diseases

1.Lung cancer

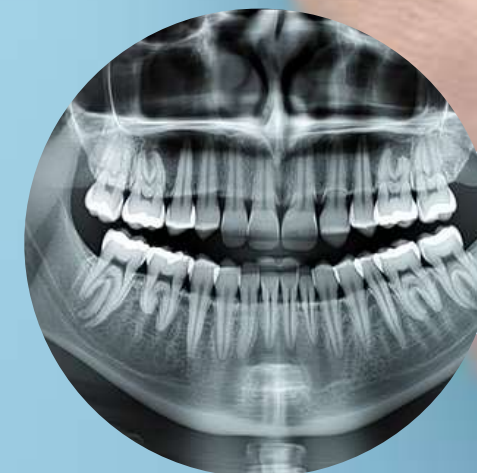

2.Lung-with-TB

3.Brain tumour

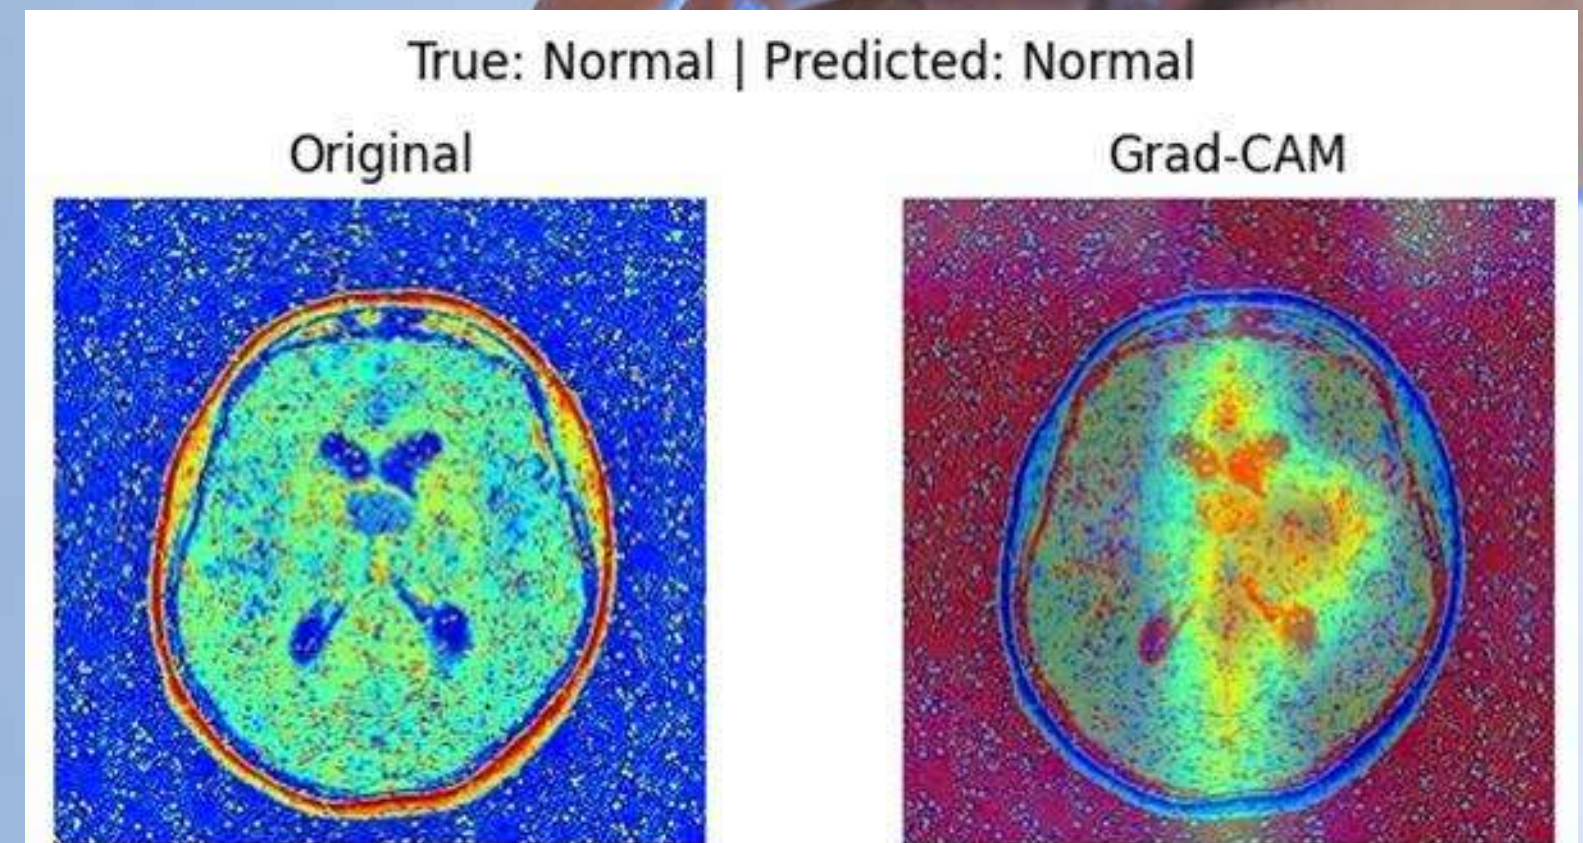

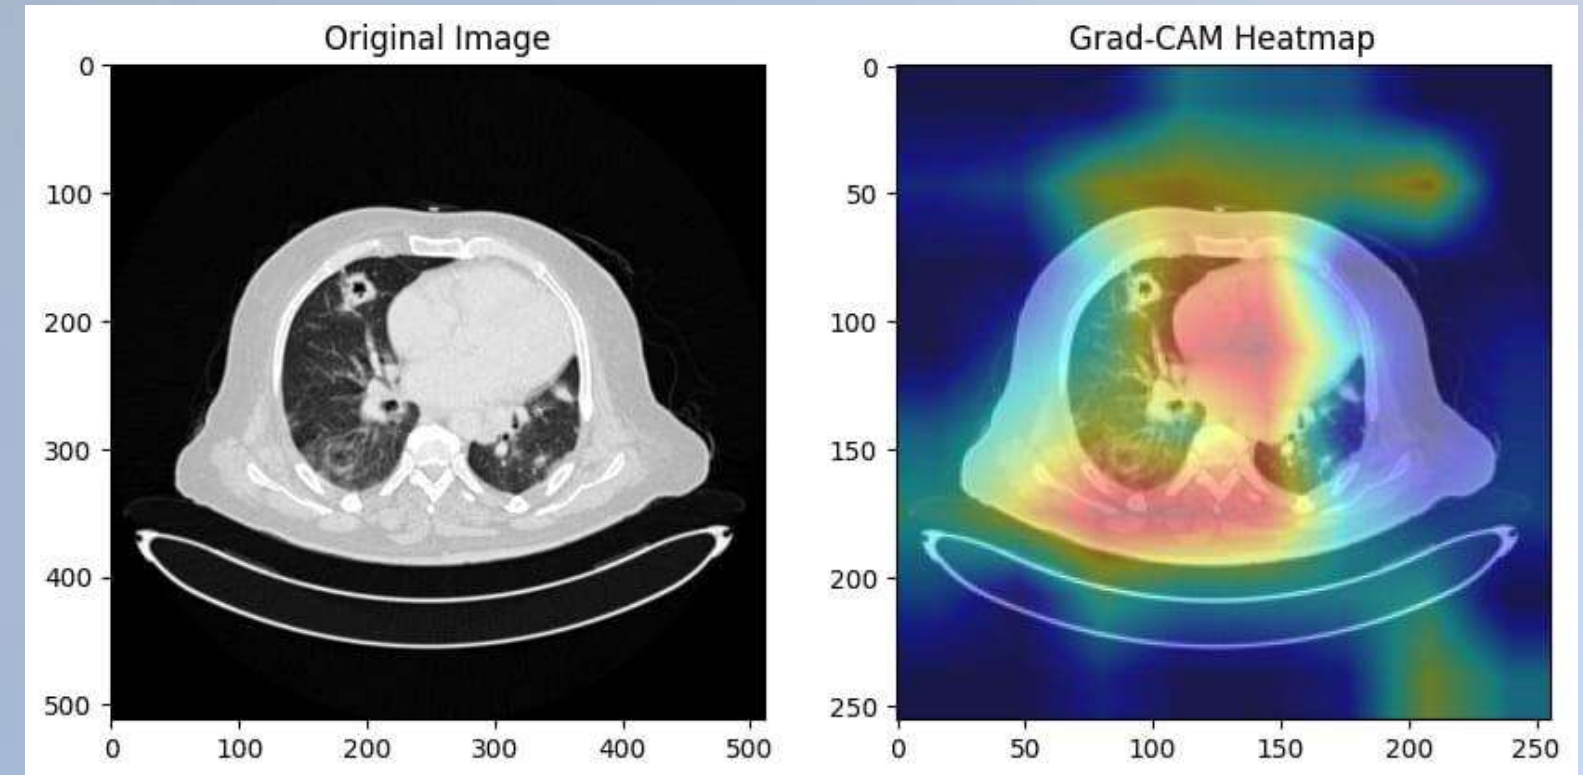

4.Pancreas

5.Dental x-ray

Simplified Technical:

- DEEP LEARNING ALGO
- EXPLAINABLE AI (XAI)
- IMAGE PREPROCESSING
- TRANSFRE LEARNING
- TRANSFORM

Powerful Pitch for Doctor AI:

- Increased accuracy has also led to less confusion in diagnosis.
- Rapid and early diagnosis accounts for 80% of treatment.
- The powerful feature of Doctor_AI is its ability to scan a large number of images in just a few seconds - a time-consuming task for doctors, especially in busy hospitals.
- The model is trained on thousands of real, high-resolution images, enabling it to detect diseases more accurately than humans.
- The doctor focuses primarily on the treatment process, as the model is capable of making a diagnosis in a matter of seconds.
- It solves the problem of the shortage of specialist doctors.

Project Goal:

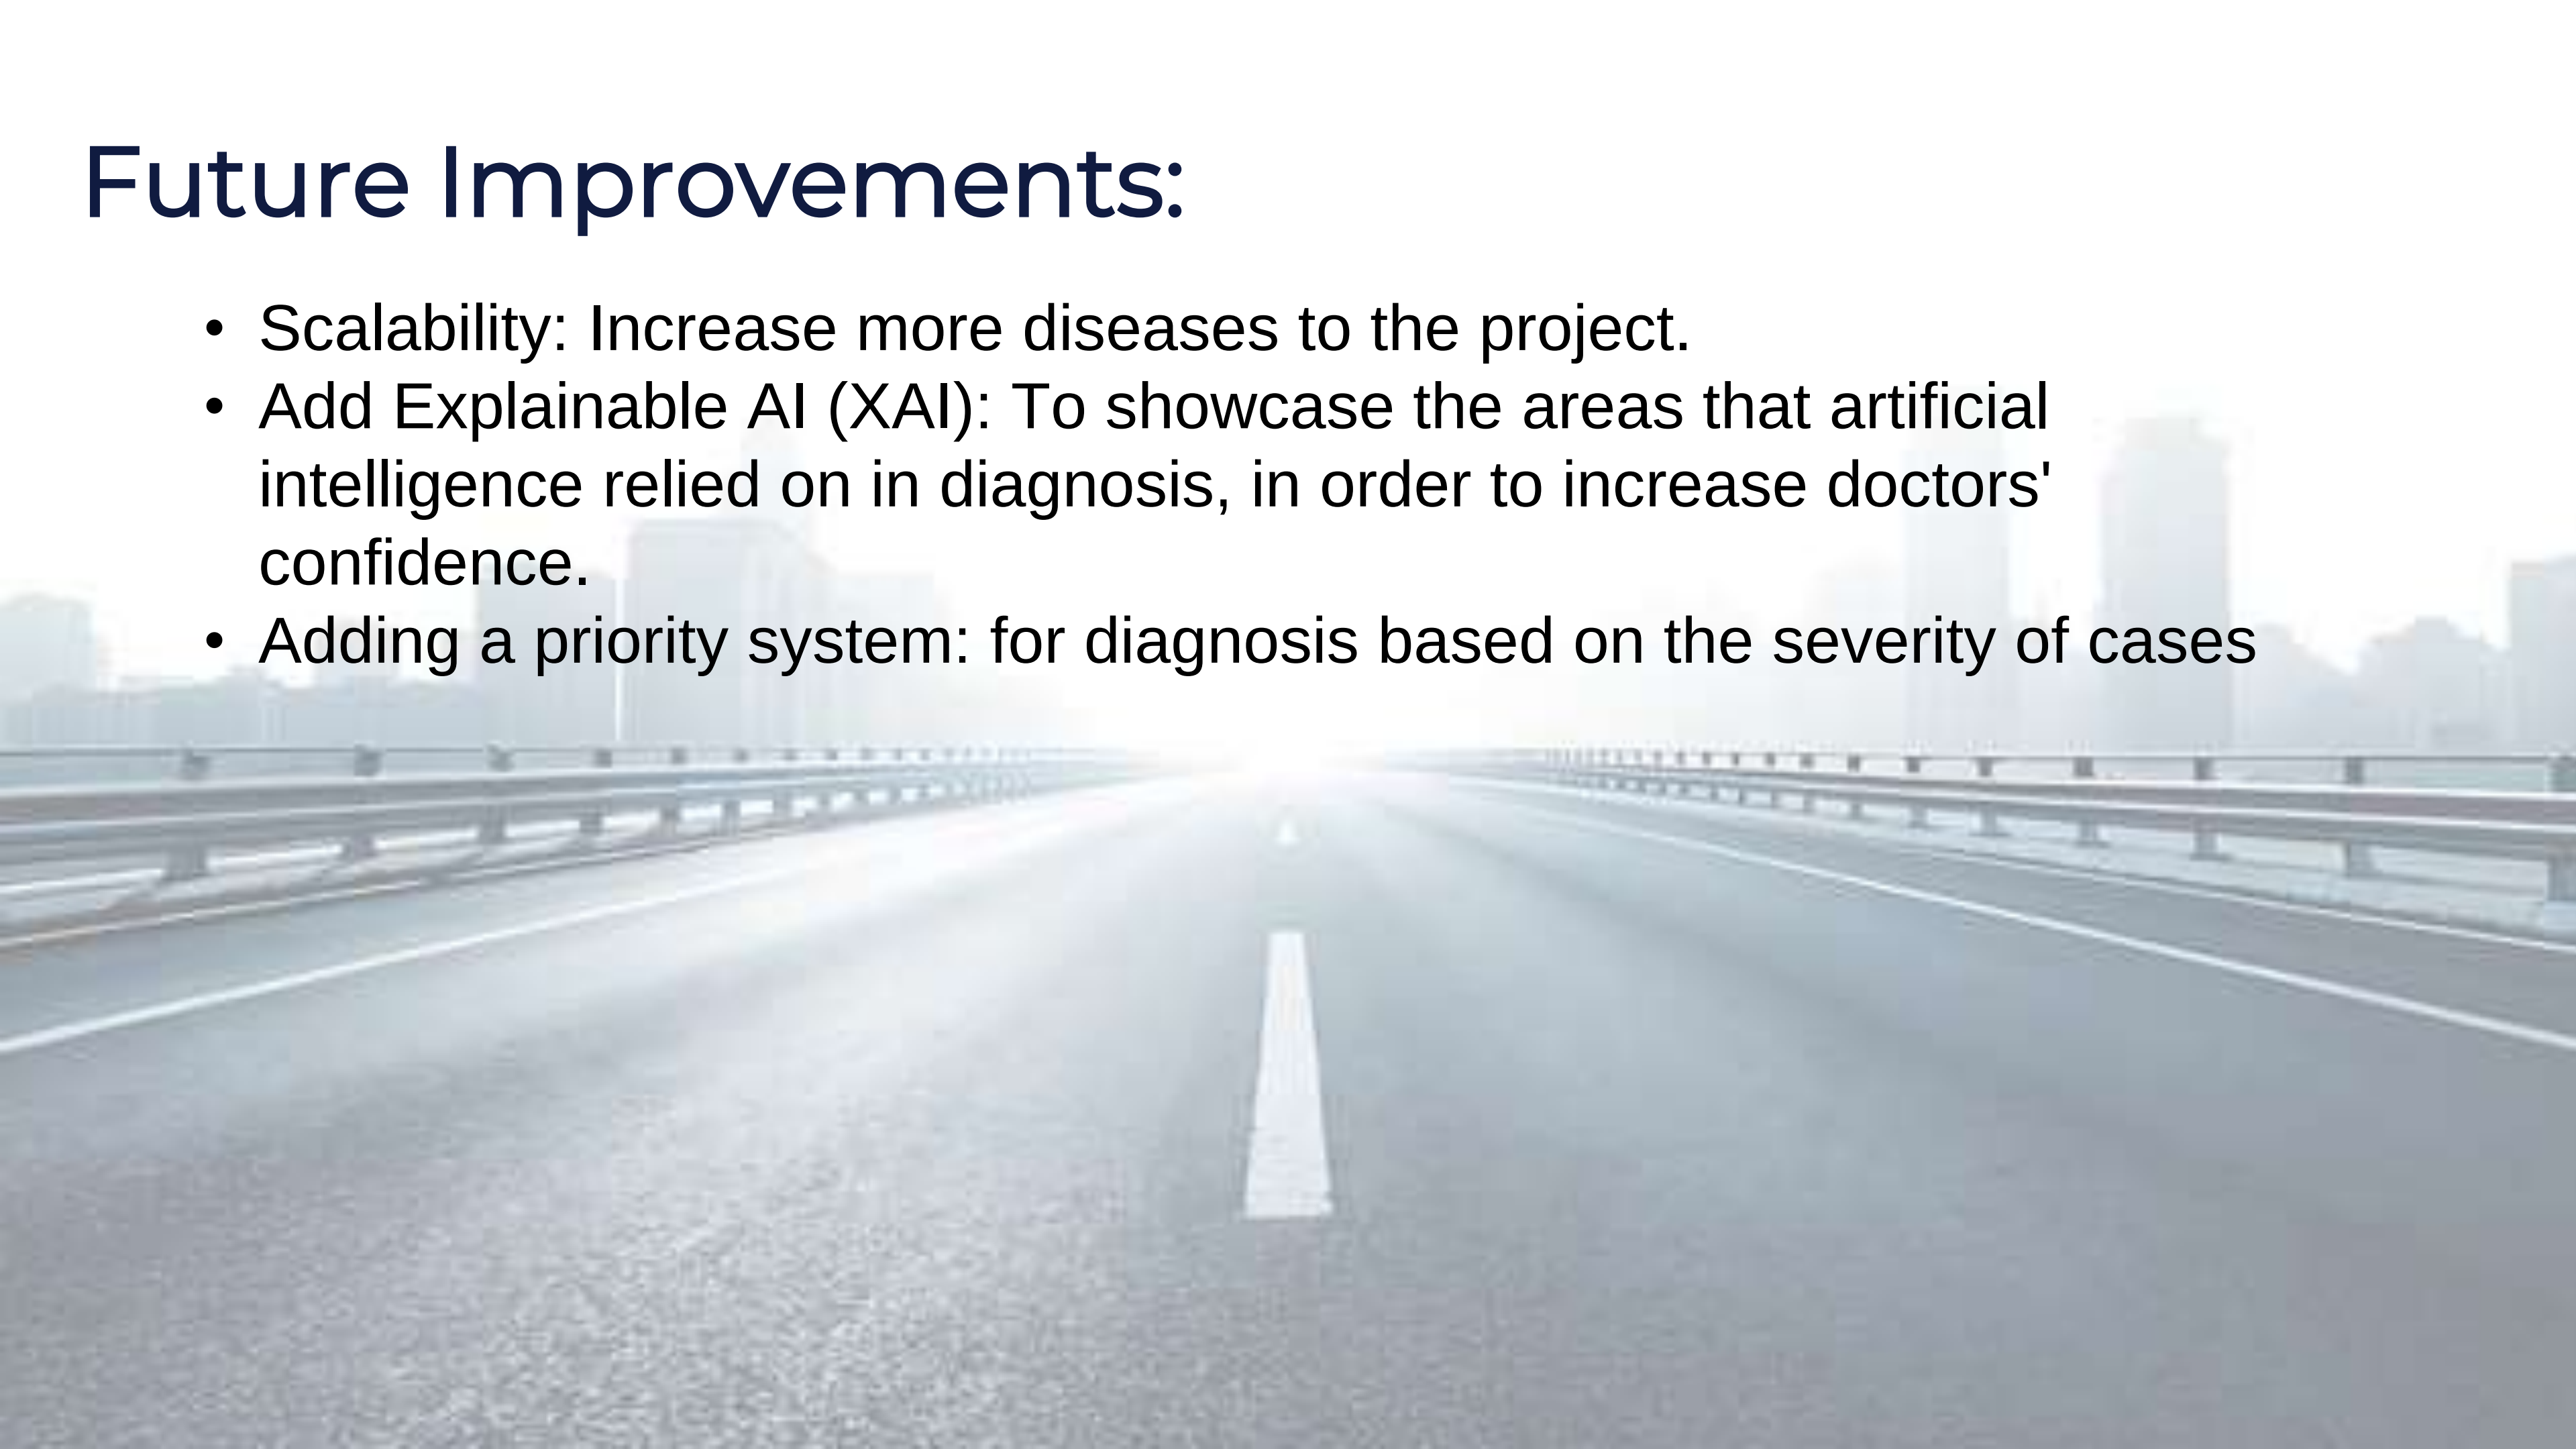

Our goal isn't to create a device that replaces the doctor—our goal is to create technology that enhances their capabilities, reduces errors, and helps them provide better and faster treatment for the patient. That's why we believe Doctor AI isn't just a project... it's a real step towards a future of smart, fast, and accessible medicine for everyone.

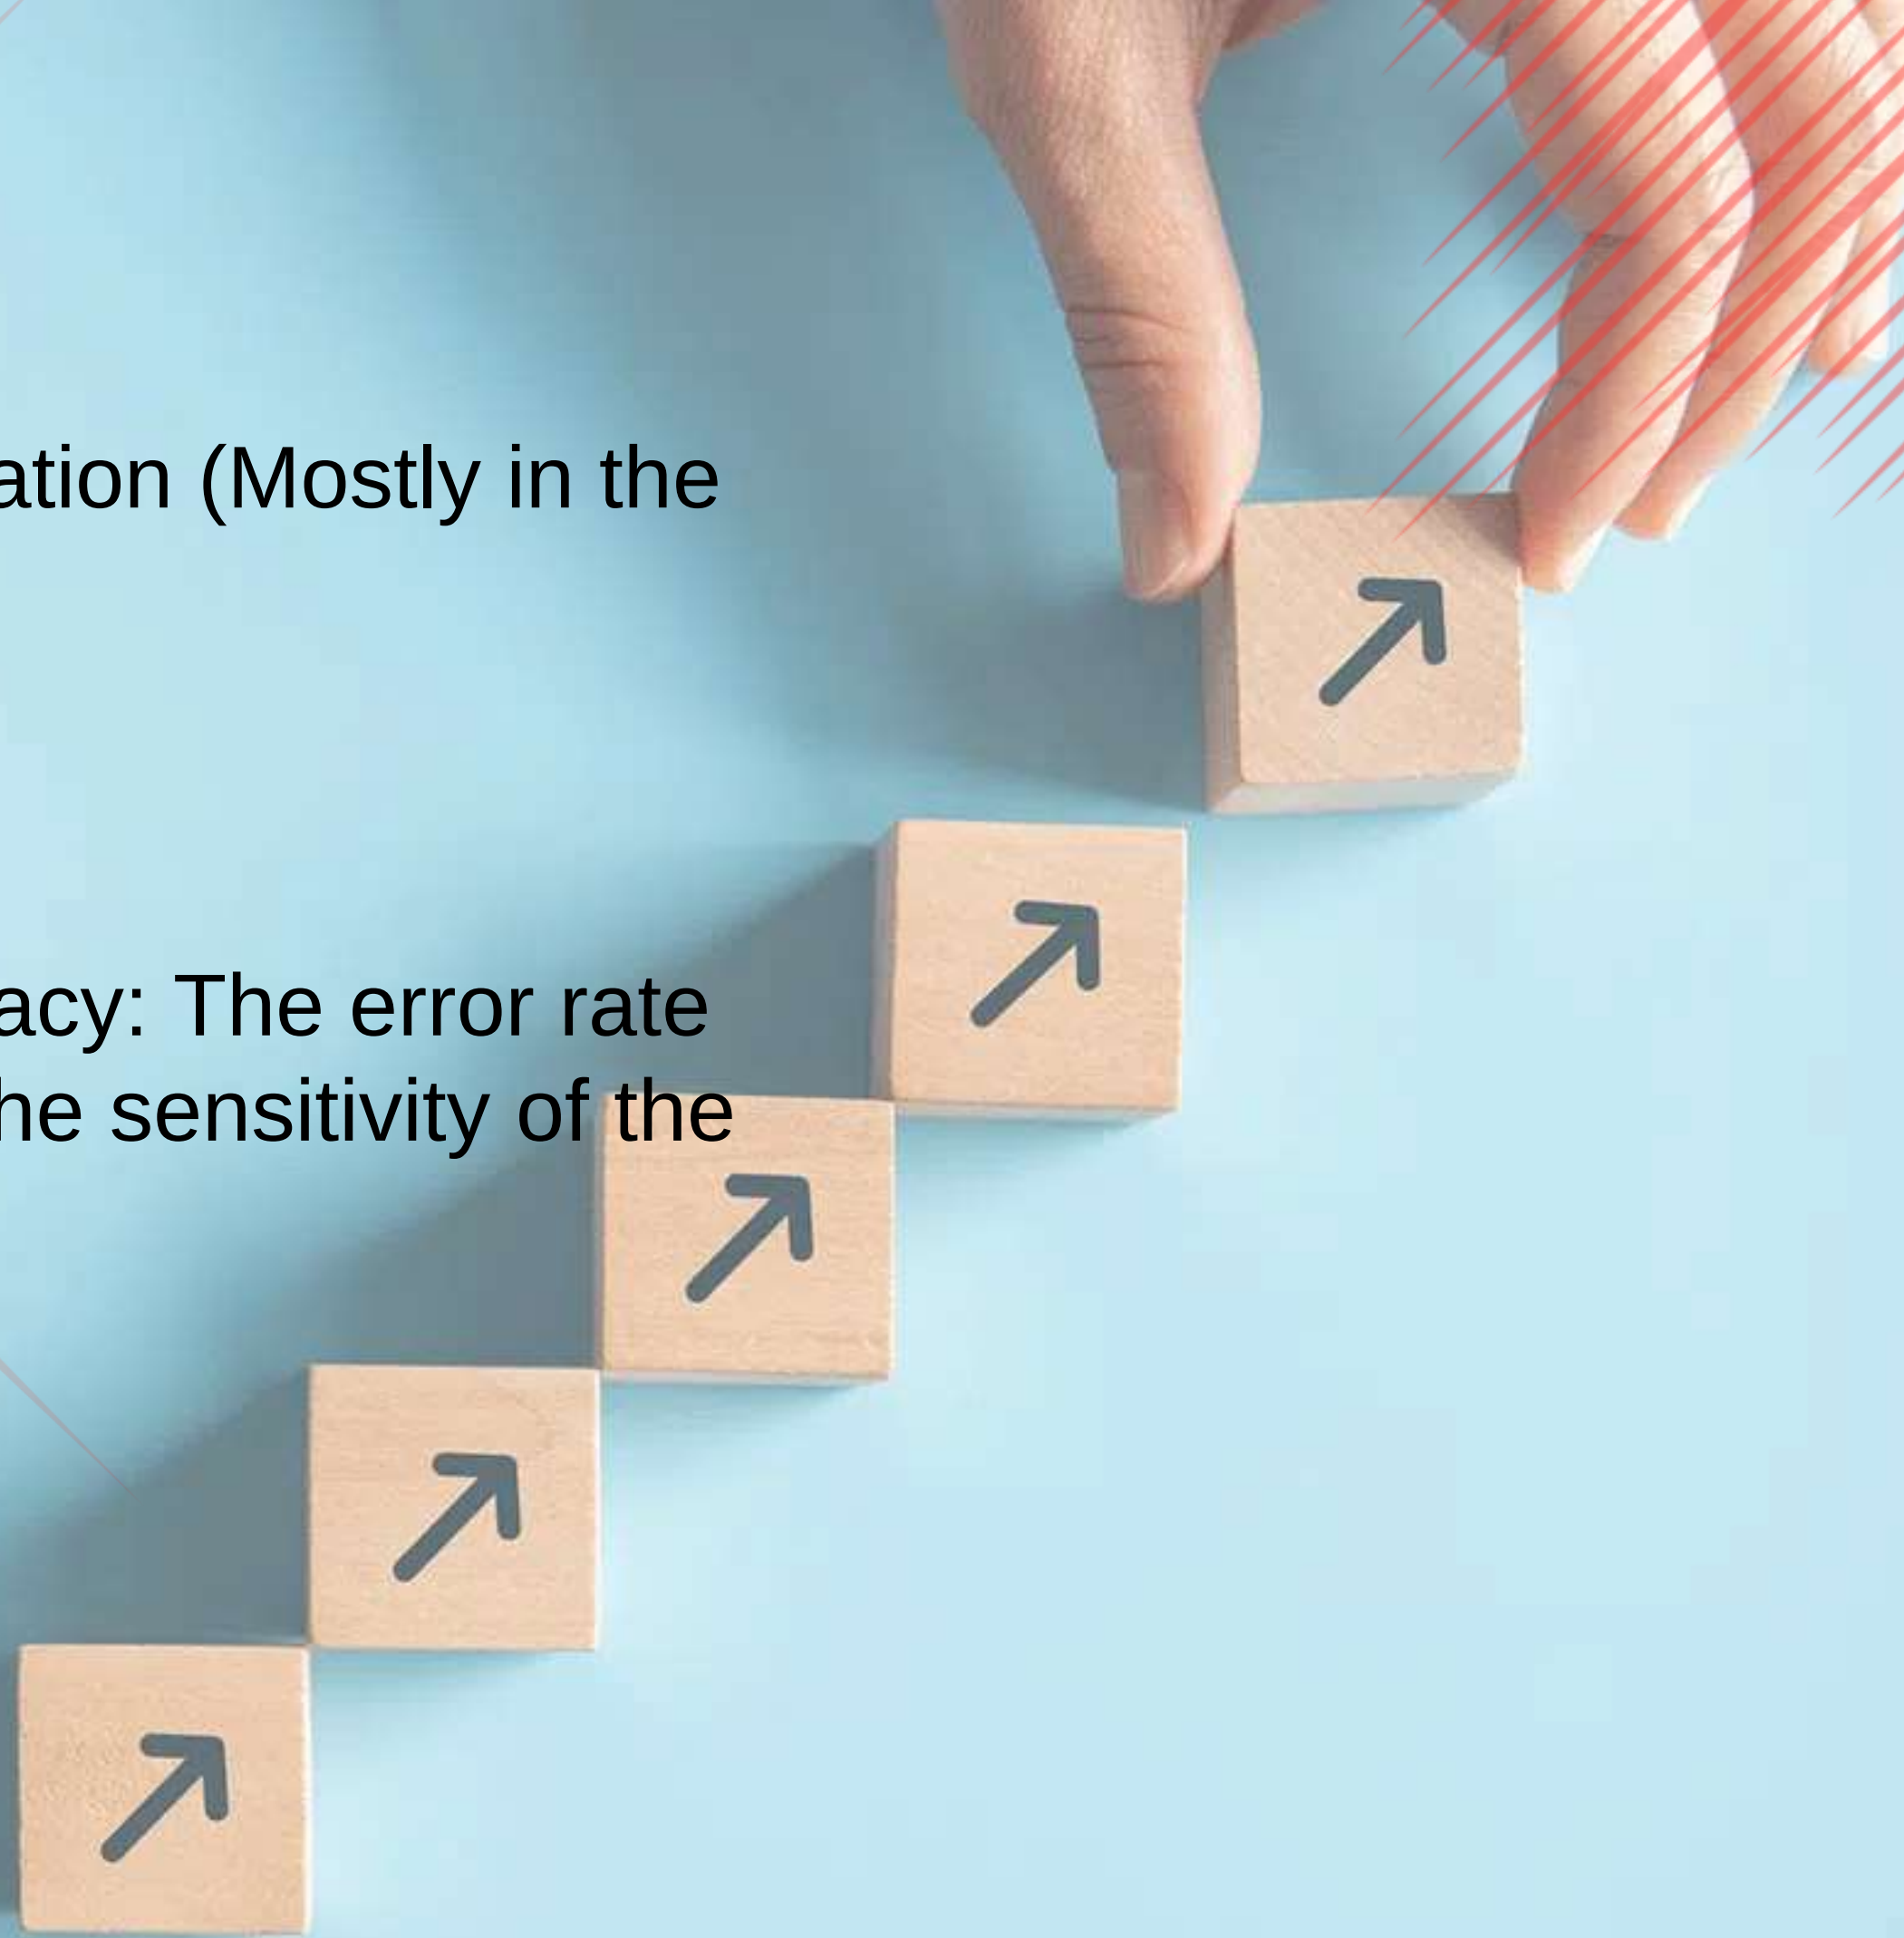

Future Improvements:

- Scalability: Increase more diseases to the project.
- Add Explainable AI (XAI): To showcase the areas that artificial intelligence relied on in diagnosis, in order to increase doctors' confidence.
- Adding a priority system: for diagnosis based on the severity of cases

⚠️ Challenges:

- Cases that have no explanation (Mostly in the brain).
- Data reliability.
- The highest possible accuracy: The error rate should be very low due to the sensitivity of the medicine.

THANK YOU!
